Exam : **350-601**

Title : Implementing Cisco Data
Center Core Technologies
(350-601 DCCOR)

Version : DEMO

- 1.What is a feature of NFS?
- A. role-based access control
 - B. Kerberos-based security model
 - C. block-based file access
 - D. zone-based access control

Answer: B

Explanation:

<https://www.cisco.com/c/en/us/support/docs/security-vpn/kerberos/16087-1.html#modifiednfs>

Kerberos Security Implications of the Modified NFS

This implementation is not completely secure. For starters, user data is still sent across the network in an unencrypted, and therefore interceptable, form. The low-level, per-transaction authentication is based on a <CLIENT-IP-ADDRESS, CLIENT-UID> pair provided unencrypted in the request packet. This information could be forged and thus security compromised. However, it should be noted that only while a user is actively using her/his files (that is, while logged in) are valid mappings in place and therefore this form of attack is limited to when the user in question is logged in. When a user is not logged in, no amount of IP address forgery will permit unauthorized access to her/his files.

- 2.Which feature must be enabled to support the use of JSON and XML encoding when a Cisco Nexus 7000 series switch is deployed?
- A. NX-API
 - B. LLDP
 - C. Open Agent Container
 - D. Bash shell

Answer: A

- 3.Which two settings must be configured before enabling a Cisco UCS Manager domain for Cisco Intersight connectivity? (Choose two.)

- A. syslog redirection
- B. DNS servers
- C. SMTP servers
- D. NTP servers
- E. SMTP reply-to-address

Answer: B,D

- 4.Which server policy is used to install new Cisco IMC software on a server?

- A. host firmware policy
- B. hypervisor firmware policy
- C. BIOS software policy
- D. Cisco IMC software policy

Answer: A

5.A host EDG Client wants to talk to a webserver in EGP Web. A contract with default settings is defined between EPG Client and EGP Web, which allows TCP communication initiated by the client toward the webserver with TCP destination port 80.

Which statement is true?

- A. The host in EPG Client can connect to TCP destination port 80 on the webserver in EGP Web. The webserver will not be able to initiate a separate TCP connection to a host port with TCP source port 80.
- B. If EGP Web is made a preferred group member, a contract between EPG Client and EGP Web is no

longer required for the host is EPG Client and EPG Web is no longer required for the host in EPG Client to reach the webserver in EPG Web.

C. The host in EPG Client Can connect to TCP destination port 80 on the webserver in EGP Web. The webserver can initiate a separate TCP connection to a host port with TCP source port 80.

D. If vzAny is configured to consume and provide a “deny all” contract, traffic between EPG Client and EPG Web is no longer allowed.

Answer: A
